October 2018

Dear Ms. Reader,

Here at DronEats, our goal is for you to get your favorite takeout meals whenever and wherever you want. Rather than wasting time and gas going to pick up your food or relying on costly delivery services, your personal drone will pick up your food for you. When you purchase one of our drones, it will come with an app in which you place your order to restaurants within reach of your location. The drones contain a built in GPS system helping it locate nearby restaurants. Simply place your order through the app, and your drone will go pick it up. This state of the art technology not only uses GPS, but uses solar panels to maintain its charge during flight. Also, our drones are environmentally friendly by helping cut down pollution from cars.

Sincerely,

DronEats

THE OSPREY DRONE

Our Osprey has a 45 Minute flight time, travels 50 MPH and can carry up to 5 lbs. The solar panel technology built into the top of our drone will efficiently recharge while it's retrieving your food, the amount of time to fully charge the Osprey is only two hours of sunlight. The Osprey never gets lost, it flies on autopilot while following directions given by it's built in GPS. The takeoff and landing of the Osprey is vertical, which allows your meal to be safely delivered to your doorstep! And, don't forget to purchase our DRONEATS durable, insulated, reusable bag to ensure that your food stays warm or cold during it's flight!
